DESCRIPTION OF VOTING SYSTEM

Democracy Suite™ is a set of products designed to meet the requirements of the United States Electoral Assistance Commission 2005 Voluntary Voting System Guidelines and the State of New York Election Laws and Regulations.

The ImageCast Precinct Optical Scan System is an Election District level optical scan voting system used in conjunction with an external ballot storage box. The unit is designed to scan marked paper ballots, interpret voter marks on the paper ballot, communicate these interpretations back to the voter either visually through the integrated LCD display or via audio through integrated headphones, and upon acceptance of the voter, deposit the ballots into the secure ballot box.

The ImageCast has a HAVA Compliant ADA module. ADA voters use an Audio Tactile Interface (ATI) and a full-sized viewing screen to make selections via an audio and/or visual interface. When the voting session is complete, the voter reviews and verifies their selections without assistance, prints a marked paper ballot that is both machine and human readable, and inserts the ballot into an optical scanner for an independent verification. Once the ballot verification is confirmed, the ballot is automatically placed in a secure ballot storage compartment without the need for Inspector intervention.

In addition to providing an ADA system for NY, the ImageCast System is a fully integrated voting system that meets all of the Election Laws and Regulations of the State, including the requirement for full face ballots. Therefore, the ImageCast System is an all-in-one solution that can be used independently to serve ADA voters (Lot II) or as a complete NY compliant voting system (Lot I).
